tion but because they take pride in making the best of what they have. Most of the meager sums of money they do have are probably sent in from a son who has a job outside the mountains. Government programs of supplying food are also periodically necessary to support these hardy people.

There are two historical factors accounting for the hardiness assigned to the mountain people over the plains dwellers. Before independence, the plainsmen, particularly in Thessaly and Macedonia, were attached to the estates of absentee Turkish landlords and, according to travelers' accounts, lived in tenancy approaching serfdom, despised by the more independent Greeks of the mountains. Further, the plains villagers suffered for centuries from the terrible malaria of the lowlands; drained of vitality, they were probably actually poorer physical specimens than the peasants of the more healthy uplands.

As various features of the peasant's life unfold, particularly in a later discussion of village ways, we can understand even better the differences between the peoples of the mountains and the plains. Nevertheless, we should not forget that as villagers the two groups hold much in common, such as their shared loyalty to their village and their tendency to be distrustful of the "outside world," particularly of the central-government officials in Athens.

The Sea

If mountains and plains are disappointing in the resources they contribute to Greece, then surely, one would think, the sea would more than compensate by providing fish in abundance. As a matter of fact, fish are an important source of protein in the Greek diet, but before the Second World War less than half of the total amount of fish eaten (35,000 to 40,000 metric tons) was caught by Greek fishermen in Greek seas. The rest had to be bought from abroad, often from neighboring countries, out of the country's meager store of foreign exchange.[14] Students of the problem seem to believe that the sea around Greece is rich in fish and that the trouble lies in the failure of the authorities to promote and foster a fishing industry. The many fishing boats destroyed during the war are being replaced, though slowly.

The merchant marine of Greece has been through the years a source of national pride. Here is one way the sea has been put to good advantage. Before World War II Greek ships totaled 1,900,000 tons and included 500 ocean-going vessels and a coastal and Mediterranean fleet of 55 large ships and 733 caiques, or small sailing boats. In 1946 there remained 138 miscellaneous ships totaling 501,000 tons. The sale of 100 liberty ships by the United States government to Greek operators at one fourth of the original cost contributed much to the rebuilding of the Greek merchant marine,

tions to their homeland. Enough time had passed to enable many of them to assess the impact of their encounter with Greek national life, for numerous changes had followed their arrival.

Their resettlement had, in the first place, brought about a national unity not heretofore possible, since Turks and Bulgarians had left Greece (with the exception of the Turks in western Thrace who were permitted to remain because Greeks were allowed to stay in Istanbul), and the Greeks from Asia Minor were now collected in metropolitan Greece. With the exception of Cyprus and perhaps northern Epirus, there was now little ground for irredentism, which has so consistently plagued each of the Balkan states since their creation as independent political units.

A second effect of the refugees' arrival was the improvement of agriculture, especially in Northern Greece, where the refugees chiefly settled, as well as in Crete, where they improved the vineyards. Because they had been uprooted, the newcomers were much more ready to adopt modern farming methods, to use fertilizer and improved seed. They even introduced new crops to the mainland of Greece. This readiness for change at times contrasted sharply with the more apathetic and conservative native villagers.

The refugees, in the third place, helped create a public health service. Many of them settled in the marshy deltas of the rivers emptying into the Aegean Sea, where malaria — to which they had developed no immunity in Asia Minor — wiped out whole villages. Being desperate, they cooperated to the fullest with authorities who were draining the swamps and inaugurating malaria-control measures.

Even more important was the refugees' role in creating new industries, such as rug weaving, especially in urban centers. They brought in skills, including entrepreneurial ability; even the untrained represented a willing labor pool. They had to rely on their wit and skill to survive in this new environment. The same held true for the fishing industry, which at best was at a primitive level in Greece before the coming of the refugees.

One nomarch, long-familiar with the refugee problem, summarized his observations as follows:

> At the time of their coming, we looked upon these refugees as a terrible burden. But they did bring a creative and civilized element. Here in Macedonia, the refugees are a progressive element: in industry, commerce, and agriculture. They are progressive because they have had so many hardships that they are like iron which has gone through fire and become more malleable. Most of the refugees think they have a better life here than they had in their former homes.

This cataclysmic event, resulting from the disastrous Asia Minor campaign by the Greeks, brought not only a large population increase; it also introduced a social transfusion which all observers agree led to a more progressive spirit in Greece.
